

What's Different from US Data Centers?

All of the health probes are issued from whichever regional data center you have your subscription. In addition, all of the data that we capture around performance and availability is stored in that regional data center. So, if you are worried about any of the data sovereignty requirements of a particular government, you now have the capability to keep your data in a data center in your region.

There is also an onboarding process when using regional data centers. To begin this process, simply contact support@office365mon.com with your request for additional information. It may take anywhere from a couple of days up to a couple of weeks depending on the data center.

What Doesn't It Do?

It doesn't monitor Office 365 that's been created just for one specific region. For example, an instance of Office 365 will be available that is hosted and managed entirely in Germany. Office365Mon doesn't offer an option to monitor that at this time, because Microsoft has not made this offering available yet. So that means that we are continuing to monitor your Office 365 tenant where ever it exists today. When new Office 365 instances are added to a region, we will listen to customer demand to determine whether or not we will provide monitoring for them as well.

What if I Want to Use Office365Mon in a Different Data Center?

The best thing you can do if you want to use Office365Mon in a different data center is just let us know! We can generally accommodate these requests as long as the data center provides all of the minimum functionality required by the Office365Mon service. You should expect that it will take approximately two weeks to get a new data center up and running, after which new customers can begin to be onboarded.

For More Information...
